What's Happening?

7th Grade Newsletter

Mathematical Science

We launched our new project this week! Our students are combining their knowledge of the Scientific Method with their knowledge of the Number System. Ask your students about what makes a testable question? Students will be bringing home their GO Math workbooks for homework. They are encouraged to use the online Textbook and "Personal Math Trainer" to assist and to practice their skills.

Eastern Studies

Our students continue to work on their Themes Around the World project. They started exploring Prezi, the program they will use to make their final presentation. Our classes went to the library to find books on their assigned areas. With Chromebooks now officially in the hands of students, our Library Media Specialist visited the classroom and showed students how to use several different online resources available through the Everett Media Center website. (Mr. Bales and Mrs. Taylor)

Life Skills

We are continuing to work on our Orientation project which highlights the main components of our culture at New Tech: Trust, Respect and Responsibility.
(All teachers)

Week 4 Ending 9/30/16

Students dressed up for spirit week.

"Talking Points" with your child

Ask your student to tell you about the 5 Themes of Geography. See if they can give you local examples of the 5 Themes.

**Ask them to illustrate to you how we add and subtract integers using a number line for the following expression:
 $-3 + (-9) + (-8)$**
